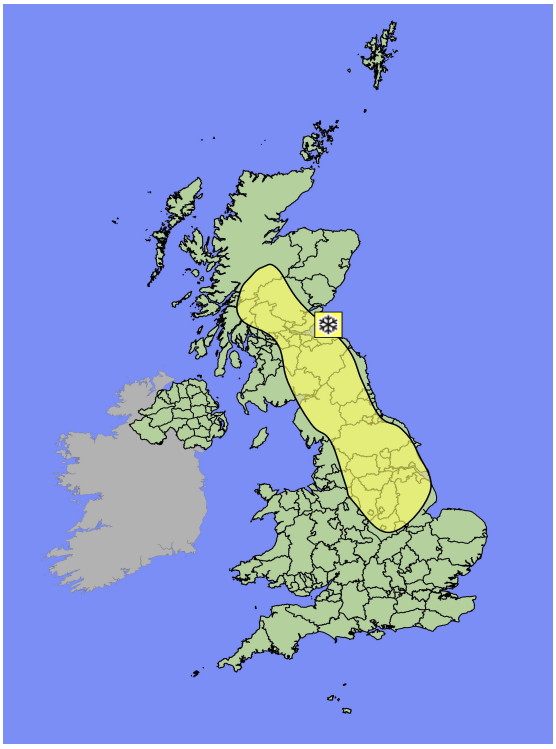
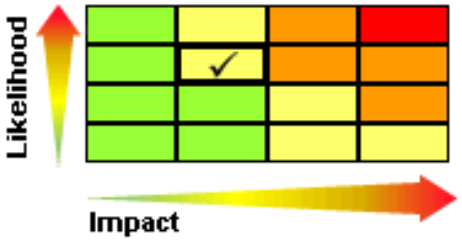
National Severe Weather Warning Service





Chief Forecasters Assessment
A warm front will move eastwards across the UK during Tuesday, bringing rain, heavy at times, to western areas. However, after a cold night across northern and eastern areas, the rain is likely to turn to snow for a time, mainly, but not exclusively over the hills. Some slushy accumulations of snow are possible down to 100 metres, with 2-5 cm above 200-300 metres and locally as much as 10 cm above 400 metres. Ice will be an additional hazard where rain falls onto sub-zero surfaces.
Sleet or wet snow may also fall over some other parts of eastern England later in the morning, but this is not expected to settle.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **04:00 on Tue, 24th Jan 2012** until **11:00 on Tue, 24th Jan 2012**

Rain will move east across the UK during Tuesday morning and is likely to turn to sleet and snow for a time across northern and eastern areas, giving some moderate accumulations of snow above 200-300 metres. Icy patches are also likely where rain falls onto sub-zero surfaces. The public should be aware of the risk of disruption to travel, chiefly to routes over higher ground.
